SUMMARY OF MAIN ECONOMIC DEVELOPMENTS AND MONETARY POLICY IN OCTOBER 2013

Real Economy

In 2013 Q3, real GDP posted a significantly faster annual growth rate than in Q2 (from 1.5 percent to 4.1 percent), on the back of the twofold rise in its quarterly dynamics (to +1.6 percent¹) and the favourable base effect associated with the 2012 Q3 economic contraction. Net external demand for goods and services further made the largest contribution to the annual increase in real GDP, i.e. 5.1 percentage points, yet the deceleration in the annual pace of decline of domestic absorption (to -0.9 percent) cannot be overlooked either. However, the relatively improved trend in domestic demand was supported only to a small extent by the economically more relevant items – specifically solely by private final consumption, whereas gross fixed capital formation and government final consumption fell at a swifter tempo.

Household final consumption reported a faster annual pace of growth (from 0.3 percent to 1 percent) following the slight recovery in retail purchases of goods and services and the significant real dynamics of self-consumption and purchases on the agri-food market, in correlation with the favourable performance of agriculture. The rebound in purchases of goods owed mainly to the trend reversal in sales of durables, while in the case of non-durables, except fuels, the recovery was of a clearly lower magnitude, and the trade in fuels further shrank in annual terms. As for durables trade, the car market made the largest contribution, on the back of: (i) sales of new motorcars due to the car scrapping scheme – despite lower-than-expected receipts this year, the average annual dynamics entered positive territory in Q3 owing to the delay of the programme's implementation as compared to the previous year (July 2013 versus May 2012), (ii) trade in used motorcars, which saw booming growth rates since the turn of the year, with the number of car registrations even posting a swifter annual pace of increase in Q3, and (iii) sales of spare parts and accessories, which reported increasingly faster annual dynamics as a result of the “ageing” trend of the car fleet. Looking at the main financing channels, the slight improvement in retail purchases was bolstered chiefly by loans, with new consumer loans adding around 5 percent in annual terms in 2013 Q3.

Gross Domestic Product	1.5	4.1
Final consumption	0.3	0.6
Households	0.3	1.0
General and local governments	-0.2	-3.2
Gross fixed capital formation	-2.9	-4.0
Exports	14.5	19.1
Imports	0.1	4.4
Source: NIS		

Gross fixed capital formation shrank by 4 percent in annual terms, the faster annual pace of decline being primarily ascribable to the significant sign reversal in the dynamics of equipment purchase (including transport means purchased by companies and public institutions). The swift rise in expenditure for capital repairs in the construction sector and under “other investment” and the upturn in financial lease purchases of equipment exerted a favourable impact on gross fixed capital formation, yet managing only to dampen the influence of equipment purchase contraction. In the same vein, mention should be also made of the deceleration in the annual rates of decline of both new construction works and lease purchases of motor vehicles (more than 95 percent of which were made by the corporate sector)².

In 2013 Q3, the real annual dynamics of exports of goods further accelerated considerably (to 19.1 percent). However, this time the development was accompanied by a rise in imports (+7.3 percent). The faster increase in sales of goods owed to exports to EU and non-EU markets alike, both of which saw at least a twofold rise in their growth rates. As a matter of fact, in Q3 sales to non-EU countries accounted for almost 32 percent of the total value of exports, marking a post-accession record high. Sales of capital goods and raw materials witnessed the swiftest growth rates, in the latter case the largest contribution coming from exports of grains (particularly wheat) mostly to countries in Northern Africa and the Middle East.

On the supply side, agriculture accounted for more than half of real GDP growth; the annual pace of increase of GVA in this sector added around 7 percentage points to 24.6 percent, a performance to which the quarterly contraction of more than 8 percent in the same year-ago period made a substantial contribution.

The faster pace of GDP dynamics was also manifest in the non-agricultural sectors, among which industry was the major contributor (6.9 percent annual growth). Similarly to Q1 and Q2, production gains were destined to meet external demand, while domestically the volume of sales of locally-manufactured industrial products contracted – as shown by the opposite trends in the turnover of industrial output for the two markets.

The construction sector also witnessed favourable developments, with annual growth of GVA coming in at 3.8 percent. All types of construction objectives posted trend reversals – engineering works, non-residential buildings (market signals are indicative of a stronger support from the public sector – construction of hospitals and roads), and especially housing construction works,

GDP by Origin

including repair works in particular, in step with the faster pace of lived-in house purchases under the “First Home” Programme. These transactions peaked in July, the month prior to the coming into force of the authorities’ decision to no longer grant preferential terms for EUR-denominated mortgage loans.

Services represented the only sector witnessing a contraction in GVA in Q3 (by 0.9 percent year on year). Trade and transports, as well as professional and public services, reported a weaker performance than in the same year-ago period. IT&C activity remained stagnant, only financial and real estate transactions displaying GVA growth.

In October 2013, the annual dynamics of industrial output volume rose marginally to 10.6 percent, amid the marked acceleration in the annual change corresponding to the energy sector. This development was attributed to (i) the larger quantity of electricity produced by wind power stations (at present, their production accounts for 8.1 percent of total energy resources, compared with 5.4 percent in the same period a year ago), and (ii) the early supply of heating, given the unusually cold weather for this time of year. The annual dynamics of manufacturing decelerated moderately from the previous month (to 11.2 percent, against the background of an unfavourable statistical effect), several important sub-sectors further showing robust annual growth rates: food industry (due to the bumper crops in 2013), transport means, electrical equipment (one of the key manufacturers increased its production capacities), machinery and equipment. Nevertheless, the prospects for the period ahead remain pessimistic, with the DG ECFIN confidence indicator going down slightly to -3.6 points.

Registered unemployment rate advanced noticeably in October, to 5.5 percent¹, this development – correlated with the ILO unemployment rate remaining unchanged at 7.3 percent, close to the peak seen after the onset of the crisis, as well as with the increased number of insolvencies – pointing to unfavourable labour market conditions. Short-term expectations paint a similar picture – the DG ECFIN survey indicates slightly more favourable prospects only for the retail sector, while for the start of 2014 the Manpower Employment Outlook Survey envisages labour demand stabilising at levels close to those expected in 2013 Q4. The annual dynamics of net average wage slowed down to 4.1 percent from the previous month, mainly as a result of the deceleration in industry, with mining and quarrying posting a strong downward adjustment.

In October 2013, the turnover volume in trade and services rose further in annual terms by around 2 percent. This positive evolution was entirely ascribable to trade, with (i) the annual growth rate of non-durables nearing 2 percent, mainly as a result of the upturn in sales of food items, given the further expansion of retail chain stores; (ii) the annual rate of increase of durables stagnating around 4 percent against the background of a considerably improved performance on the IT&C segment³, which offset the decelerations posted by the sales of furniture and household appliances, as well as of motor vehicles. The annual growth rate of the volume of receipts from market services to households entered the negative territory (-5 percent), in the context of declining annual changes posted by all segments, except for hotels, which saw a quasi-stagnation.

According to preliminary data⁴, in October 2013, exports of goods added 12 percent year on year, with more than three fourths of the dynamics being further accounted for by “machinery and transport equipment” and “food products and live animals” respectively. Except for chemical products, all main groups of goods witnessed positive growth rates. Imports of goods saw a much lower annual change (merely 0.7 percent), with “mineral fuels, lubricants and related materials” making the main contribution to growth. Thus, trade deficit plunged by almost 53 percent from the same year-ago period to EUR 423 million.

In October 2013, the annual growth rate of industrial producer prices for the domestic market remained on a downward trend (to 1 percent), owing to several factors: (i) further declining prices on the electricity market, (ii) the return of international oil prices to a downward path, against the background of weaker global demand, high inventories and abating geopolitical tensions, (iii) the sharp fall in domestic prices of agri-food commodities, as well as (iv) a persistent demand deficit⁵. Thus, most groups of products saw a slackening, with energy products posting a more pronounced loss of momentum (-1.4 percentage points to 3.9 percent), except for intermediate goods, the annual dynamics of which remained at a level similar to that in the previous period.

In October 2013, the annual inflation rate remained at the level seen in September, i.e. 1.88 percent, in the context of mixed developments. Thus, (i) the negative contribution made

³ The annual dynamics rose by roughly 17 percentage points to 11.7 percent, possibly on account of the start of the sales season in this sector in the third ten-day period of October.

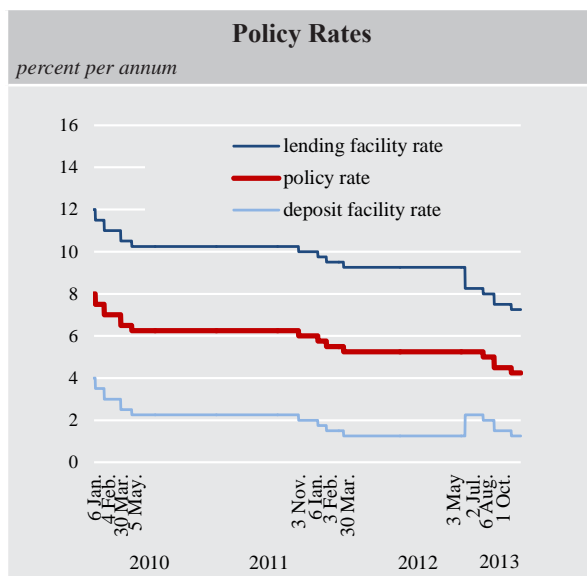

⁴ NIS.

⁵ In October, the turnover volume for the domestic market (deflated by the producer price index) in manufacturing shrank by 3.4 percent in annual terms.

by “vegetables, fruit, eggs” decreased following a significant monthly change (3 percent), (ii) fuel prices saw a larger annual contraction, in the context of a monthly deflation driven by the 2.6 percent appreciation of the domestic currency against the US dollar, (iii) the higher prices posted by several regulated-price products were offset by a favourable statistical effect. The annual rate of adjusted CORE2 inflation fell slightly into the negative territory, under the joint impact of the cut in the VAT rate for bread, flour and some bakery products, the bumper crop in 2013 and the base effect associated with the poor output in 2012.

Monetary Policy

In October monetary policy was implemented in line with the decisions taken by the NBR Board in its meeting of 30 September 2013, namely to lower the policy rate by 0.25 percentage points to 4.25 percent per annum, to adequately manage liquidity in the banking system, and to leave unchanged the existing levels of minimum reserve requirement ratios on both leu- and foreign currency-denominated liabilities of credit institutions.

The positive value of banks' net liquidity position declined marginally in the month under review, in which context credit institutions' resort to the deposit facility diminished slightly¹, although liquidity conditions remained loose. Against this background, overnight rates on the interbank money market dropped in the first part of October close to the lower bound of the corridor defined by interest rates on the central bank's standing facilities around the policy rate, before returning to higher readings – albeit well below the September peak – at the onset of the reserve maintenance period. Hence, average interbank rates re-embarked on a downward path and hit a new historical low² of 2.42 percent.

Longer-term interbank rates also embarked on a downtrend in the first part of the reported month, reflecting credit institutions' expectations on the NBR continuing the rate-cutting cycle and the further loose liquidity conditions. Their downward path steepened towards end-October, taking the average 3M ROBOR to 3.11 percent, down 0.54 percentage points versus September, while average 6M and 12M ROBOR rates witnessed declines of a lower magnitude (down approximately 0.4 percentage points), to stand at 3.62 percent and 3.72 percent respectively.

The EUR/RON exchange rate temporarily saw larger shifts in the first part of October, amid somewhat higher volatility on global financial markets, induced by the protracted fiscal deadlock in the US. The relative easing of political tensions in Italy had an opposite, albeit less strong effect on market sentiment. The EUR/RON then embarked on a smooth, downward path³, thanks

¹ Given the systematic absence and the subdued volume respectively of bids submitted by credit institutions during the auctions conducted by the NBR in the previous two months, repo tenders were discontinued again during October.

² In the last 20 years.

³ Overall, the EUR/RON exchange rate inched down 0.4 percent on average in the reported month.

to a relative improvement in global risk aversion, underpinned by the solving of the US budget impasse and especially by emerging signs that the tapering of the Federal Reserve's asset purchase programme may be delayed until early 2014⁴.

Credit institutions' average interest rates on new time deposits and new loans stuck to the downward path and hit new historical lows⁵. Average lending rates on new business to households fell most, shedding 0.72 percentage points (to 9.54 percent), reflecting both the interest rate adjustment and the influence of the relatively wider share of new housing loans in total credit to this sector. Average interest rates on new corporate loans witnessed a somewhat less pronounced decline, i.e. down 0.12 percentage points compared to September, to 7.78 percent. In turn, the average time deposit rate on new business to companies and households edged down 0.43 percentage points to 2.70 percent and 0.21 percentage points to 4.19 percent respectively.

⁴ A similar effect had the preservation of an accommodative monetary policy stance by the other major central banks (ECB, Bank of England and Bank of Japan) and possibly the slightly better-than-expected performance of the Chinese economy in 2013 Q3.

⁵ In the last 20 years.

LEGISLATIVE INDEX

Main rules and regulations adopted in the economic, financial, and banking areas in October 2013

Order No. 1661 of 1 October 2013 issued by the Minister Delegate for Budget approves the issue prospectuses for the discount Treasury certificates and benchmark government securities for October 2013 (*Monitorul Oficial al României* No. 614/2 October 2013).

Order No. 1662 of 1 October 2013 issued by the Minister Delegate for Budget approves the issue prospectus for the EUR-denominated coupon-bearing government securities launched in October 2013 (*Monitorul Oficial al României* No. 614/2 October 2013).

Law No. 260 of 2 October 2013 approves Government Emergency Ordinance No. 55/2013 on some fiscal and budgetary measures and on amending some pieces of legislation (*Monitorul Oficial al României* No. 620/4 October 2013).

Order No. 72 of 2 October 2013 issued by the President of the Romanian Energy Regulatory Authority approves the Methodology on setting the prices for electricity distribution services (*Monitorul Oficial al României* No. 623/8 October 2013).

Law No. 264 of 10 October 2013 approves Government Emergency Ordinance No. 32/2013 on regulating some financial and fiscal measures (*Monitorul Oficial al României* No. 633/14 October 2013).

Order No. 73 of 10 October 2013 issued by the President of the Romanian Energy Regulatory Authority approves the Regulation on the organisation and functioning of the intraday electricity market (*Monitorul Oficial al României* No. 640/17 October 2013).

Law No. 267 of 11 October 2013 approves Government Emergency Ordinance No. 50/2013 on regulating some fiscal measures (*Monitorul Oficial al României* No. 634/14 October 2013).

Law No. 270 of 15 October 2013 amends and supplements Law No. 500/2002 on public finance (*Monitorul Oficial al României* No. 642/18 October 2013).

Order No. 1738 of 21 October 2013 issued by the Minister Delegate for Budget approves a borrowing by the Ministry of Public Finance on the international capital markets via reopening the issue of 7-year bonds with a coupon of 4.625% maturing on 18 September 2020, to the amount of EUR 250 million at least and EUR 500 million at most, under the Medium Term Notes Programme, as well as the appointment of lead managers (*Monitorul Oficial al României* No. 644/21 October 2013).

Law No. 272 of 21 October 2013 amends and supplements Government Emergency Ordinance No. 98/2006 on the additional supervision of credit institutions, insurance and/or reinsurance undertakings, security and derivative dealers and asset management companies in a financial conglomerate, Government Emergency Ordinance No. 99/2006 on credit institutions and capital adequacy and Law No. 32/2000 on insurance and insurance supervision (*Monitorul Oficial al României* No. 656/25 October 2013).

Law No. 273 of 21 October 2013 approves Government Emergency Ordinance No. 68/2012 amending and supplementing some pieces of legislation and regulating some financial and fiscal measures (*Monitorul Oficial al României* No. 652/23 October 2013).

Law No. 274 of 21 October 2013 approves Government Emergency Ordinance No. 41/2013 on regulating some financial measures (*Monitorul Oficial al României* No. 652/23 October 2013).

Order No. 1743 of 21 October 2013 issued by the Minister Delegate for Budget sets the interest rates applied by the State Treasury (*Monitorul Oficial al României* No. 658/25 October 2013).

Order No. 77 of 23 October 2013 issued by the President of the Romanian Energy Regulatory Authority approves benchmark and regulated prices for electricity to be applied in 2014 by combined heating and electricity producers receiving a bonus (*Monitorul Oficial al României* No. 664/30 October 2013).

Order No. 78 of 23 October 2013 issued by the President of the Romanian Energy Regulatory Authority approves the levels of benchmark bonuses for electricity from high efficiency cogeneration and the benchmark prices for cogeneration heating to be applied in 2014 (*Monitorul Oficial al României* No. 664/30 October 2013).

Government Emergency Ordinance No. 99 of 30 October 2013 rectifies the 2013 state budget (*Monitorul Oficial al României* No. 672/1 November 2013).

Government Emergency Ordinance No. 100 of 30 October 2013 rectifies the 2013 state social security budget (*Monitorul Oficial al României* No. 672/1 November 2013).

Order No. 1794 of 31 October 2013 issued by the Minister Delegate for Budget approves the issue prospectus for the benchmark government securities for November 2013 (*Monitorul Oficial al României* No. 673/1 November 2013).

Main regulations issued by the National Bank of Romania in October 2013

Circular No. 30 of 3 October 2013 sets the penalty rate on leu-denominated reserve deficits starting with the 24 October – 23 November 2013 maintenance period (*Monitorul Oficial al României* No. 631/11 October 2013).

Circular No. 31 of 15 October 2013 sets the interest rates on required reserves starting with the 24 September – 23 October 2013 maintenance period (*Monitorul Oficial al României* No. 648/22 October 2013).

Circular No. 32 of 16 October 2013 on putting into circulation, for numismatic purposes, a gold coin dedicated to the 150th anniversary of the establishment of the 'Junimea' Literary Society (*Monitorul Oficial al României* No. 664/30 October 2013).

Regulation No. 4 of 29 October 2013 on the fitness checking of Romanian banknotes with a view to their being recirculated (*Monitorul Oficial al României* No. 685/7 November 2013).

Norms No. 1 of 31 October 2013 on cash operations performed by credit institutions and the State Treasury with the National Bank of Romania and their settlement (*Monitorul Oficial al României* No. 686/8 November 2013).

15.2. International Investment Position - Key Indicators.....	72
15.3. International Investment Position.....	74
16. General Government Indicators.....	75
Methodological Notes.....	76

Symbols used in tables:

... = missing data

– = nil

0 = less than 0.5 but more than nil

x = not applicable

p.a. = per annum

c = confidential (if the indicator is obtained by aggregating data from maximum of two reporting entities).

Totals may not add up, due to rounding.

1. MAIN MACROECONOMIC INDICATORS

(annual percentage change, unless otherwise indicated)

Period	Gross domestic product ^{1,2}			Industrial output ^{2,5}	Labour productivity in industry ^{2,5}	Industrial producer prices ^{3,5}	Industrial producer prices - domestic market ⁵	Domestic trade ^{2,4,5}		Market services to households ^{2,4,5}
	nominal (lei mn.; current prices)	real	deflator					retail sales ⁶	motor vehicles and motorcycles ⁷

1) According to NBR Order No. 13/2011; starting with January 2008, the leverage ratio is determined based on average assets;

2) Indicators only for banks - Romanian legal entities and Creditcoop; foreign bank branches do not report on capital adequacy, own funds and loan classification;

3) According to NBR Order No. 27/2010, as subsequently amended and supplemented and NBR Order No. 2/2011;

4) According to NBR Regulation No. 16/2012 and NBR Order No. 15/2012, as subsequently amended and supplemented;

5) According to NBR Order No. 22/2011 and NBR Regulation No. 25/2011; the liquidity ratio is expressed in units.

Note: Starting with January 2012, indicators are calculated according to the reports drawn up based on IFRS.

11.3. Credit Risk Information*

Period	Total debts - overall risk (lei mn.)	Total past-due debts (lei mn.)	Number of debtors (legal and natural entities)	Number of defaulters (legal and natural entities)	Number of CCR data base queries about own and prospective debtors	Number of CCR data base queries about prospective debtors, with their consent	Number of loans granted and commitments assumed by credit institutions	Number of debtors (legal and natural entities) reported by two or several reporting entities**	Number of debtors (legal and natural entities) total reporting entities**	Number of defaulters (legal and natural entities) total reporting entities**

Note: NBR Regulation No. 2/2012 on the organisation and functioning of the Central Credit Register operated by the National Bank of Romania became effective on 1 February 2012.

*) Refers to the exposure to a single debtor, which may be equal to or higher than lei 20,000 and accounts for 90.4 percent of the value of loans granted and commitments undertaken by the banking system, according to the data released on 30 June 2013. The amount granted is the loan extended or the commitment undertaken according to the contract. The amount granted is not updated in the current month for the loans or commitments in foreign exchange reported in previous months.

Note: NBR Regulation No. 2/2012 on the organisation and functioning of the Central Credit Register operated by the National Bank of Romania became effective on 1 February 2012.

*) Refers to the exposure to a single debtor, which may be equal to or higher than lei 20,000 and accounts for 83.6 percent of the value of loans granted and commitments undertaken by non-bank financial institutions included in the Special Register (NBFI), electronic money institutions with significant lending activity (EMI) and payment institutions with significant lending activity (PI), according to the data released on 30 June 2013. The amount granted is the loan extended or the commitment undertaken according to the contract. The amount granted is not updated in the current month for the loans or commitments in foreign exchange reported in previous months.

Methodological Notes

1. Main Macroeconomic Indicators

Data series on the main social and economic indicators are taken from the publications of the National Institute of Statistics (Monthly Statistical Bulletin, Industry Statistical Bulletin, Prices Statistical Bulletin) or its Tempo-Online database; some of these data are preliminary and may be revised subsequently.

The quarterly changes in certain monthly indicators (industrial output, industry-wide labour productivity, industrial producer prices, industrial producer prices for the domestic market, domestic trade, market services to households, consumer prices) are calculated starting from fixed-base index series. As a result of the switch from the base year 2005 to the new base year 2010 and, therefore, following the update of the weights used for the calculation of indices, the data series were re-calculated and the quarterly and annual changes for 2008-2012 are obtained by using the index series with the 2010 fixed base year. Data series are updated on a regular basis once they are published by the NIS.

Annual data for economy-wide employment and average wage are taken from the “Earnings and labour cost” bulletin, published by the NIS.

CORE1 is the core inflation measure used by the NBR and reflects changes in market prices; CORE1 is calculated based on the overall CPI excluding administered prices.

CORE2 is the core inflation measure used by the NBR and reflects changes in market prices and in prices with relatively low volatility; CORE2 is calculated based on the overall CPI excluding administered prices and highly volatile prices (vegetables, fruit, eggs, fuels).

The adjusted CORE2 is the core inflation measure that excludes from the overall CPI a number of prices on which monetary policy (via aggregate demand management) has limited or no influence: administered prices, volatile prices (vegetables, fruit, eggs and fuels), prices of tobacco products and alcohol.

The harmonised index of consumer prices (HICP) is obtained based on the Eurostat methodology.

3. Monetary Policy Indicators

3.1. Open Market Operations Performed by the National Bank of Romania

Open market operations performed by the NBR and lending and deposit facilities granted by the central bank to eligible participants are laid down in NBR Regulation No. 1 of 30 March 2000 republished, as subsequently amended and supplemented. The volume of open market operations performed by the NBR is shown as daily averages for both transactions performed in the reference period (flow data) and their balance (stock data). The average interest rate in the reporting month is calculated as an arithmetic mean (weighted by the volume of transactions) of interest rates on flow/stock operations.

3.2. Standing Facilities Granted by the National Bank of Romania to Eligible Counterparties

The NBR’s standing facilities (lending and deposit facilities) are resorted to by eligible counterparties at their initiative.

The interest rate on the marginal lending facility is the rate at which eligible counterparties are granted overnight liquidity. The interest rate on the marginal deposit facility is the rate at which eligible counterparties may place excess liquidity with the NBR at the end of the day. Starting 7 May 2008, the interest rates on the NBR's standing facilities are set up within a symmetrical corridor of ± 4 percentage points around the monetary policy rate.

3.3. Required Reserves

Required reserves are leu- and foreign currency-denominated holdings of credit institutions kept in accounts opened with the National Bank of Romania.

The calculation base for the required reserves is the daily average (for the observation period) of the outstanding leu- and foreign currency-denominated liabilities in banks' balance sheets (except for interbank liabilities, financial obligations to the NBR and equity capital). The observation period and the maintenance period come in succession and last one month each; the observation period starts on the 24th of the previous month and ends on the 23rd of the current month. Minimum reserve ratios vary by currency and residual maturity of the items included in the calculation base (below or over 2 years). Required reserves are provisioned as daily average of holdings in the NBR accounts during the maintenance period.

4. Reserve Money

Starting January 2007, the data for preparing monetary indicators are reported in accordance with the methodology established by Regulation (EC) No. 25/2009 of the European Central Bank of 19 December 2008 concerning the balance sheet of the monetary financial institutions sector (recast) (ECB/2008/32). This methodology is described in NBR Regulation No. 31/2011 on reporting statistical data and information to the National Bank of Romania, Chapter II, Title I.

Until 27 April 2012, the data for preparing monetary indicators had been reported as per NBR Norms No. 10/2009.

5. Monetary Balance Sheets of Monetary Financial Institutions

According to ESA95 methodology (the European System of Accounts), monetary financial institutions include the following institutional sectors: (i) central bank (S121) – the National Bank of Romania and (ii) other monetary financial institutions (S122) – corporations and quasi corporations, whose core business is to provide financial intermediation services, namely to receive deposits and/or close substitutes for deposits from institutional units other than monetary financial institutions, and, for their own account, to grant loans and/or make investments. This category comprises credit institutions and money market funds.

5.2. Aggregate Monetary Balance Sheet of Other Monetary Financial Institutions (Credit Institutions and Money Market Funds)

The aggregate monetary balance sheet of other monetary financial institutions includes on-balance sheet assets and liabilities of credit institutions (banks, Romanian legal persons; branches of foreign credit institutions; credit cooperative organisations), as well as those of money market funds.

5.3. Net Consolidated Balance Sheet of Monetary Financial Institutions (NBR and Other Monetary Financial Institutions)

The net consolidated balance sheet of monetary financial institutions shows the aggregation of the National Bank of Romania's monetary balance sheet with that of other monetary financial institutions (credit institutions and money market funds), in which the relations within and between the two institutional sectors (S121 and S122) were considered on a net basis.

6. Broad Money M3 and its Counterparts

Monetary aggregates have been defined in compliance with the methodology of the European Central Bank.

Narrow money (M1) comprises currency in circulation (banknotes and coins) plus overnight deposits (deposits immediately convertible into cash or used for making payments via bank transfer).

Intermediate money (M2) comprises M1 plus deposits with an agreed maturity of up to two years and deposits redeemable at notice of up to three months. The definition of M2 mirrors the interest in analysing and monitoring a monetary aggregate which, apart from cash, includes highly-liquid deposits as well.

Broad money (M3) comprises M2 plus marketable instruments issued by monetary financial institutions, money market instruments, in particular money market fund shares/units and borrowings from repurchase agreements (their highly liquid nature makes of these instruments close substitutes for deposits).

Broad money M3 counterparts are net foreign assets and net domestic assets.

Net foreign assets are calculated by subtracting foreign liabilities from foreign assets. Foreign assets include: loans to non-residents (including deposits placed with non-residents); holdings of marketable securities issued by non-residents; asset holdings and other equity stakes with non-residents; monetary gold. Foreign liabilities include funds taken from non-residents: deposits, marketable securities issued on external markets. SDR allocations from the IMF are not included.

Net domestic assets are calculated by subtracting domestic liabilities (except for M3 components) from domestic assets.

Domestic assets include: loans to residents; holdings of marketable securities issued by residents; asset holdings and other equity stakes with residents. Domestic liabilities (except for M3 components) include funds taken from residents: deposits with an agreed maturity of over two years (including deposits redeemable at notice of over three months), marketable securities with a maturity of over two years issued on the domestic market, capital and reserves.

7. Breakdown of Monetary Financial Institutions' Deposits and Loans by Institutional Sector

The breakdown of financial instrument holders and issuers by institutional sector is based on the ESA95 methodology and is shown in detail in NBR Regulation No. 31/2011 on reporting statistical data and information to the National Bank of Romania, Chapter I, Title I, namely: non-financial corporations, financial corporations (central bank, other monetary financial institutions, other financial intermediaries, financial auxiliaries, insurance corporations and pension funds), general government, households, non-profit institutions serving households, non-residents.

7.1. Deposits of Non-Government Resident Clients

Current accounts, demand deposits and all time deposits, regardless of maturity, are included.

8. Assets and Liabilities of Investment Funds

Starting December 2008, data on investment fund assets and liabilities are reported in accordance with the provisions of Regulation (EC) No. 958/2007 of the European Central Bank of 27 July 2007 concerning statistics on the assets and liabilities of investment funds (ECB/2007/8), transposed by the NBR into Chapter V of NBR Regulation No. 31/2011 on reporting statistical data and information to the National Bank of Romania, hereinafter referred to as the *Regulation*.

Based on this *Regulation*, investment undertakings and/or self-managed investment companies send monthly reports including statistics on the assets and liabilities of investment funds (IFs) under their management.

Until 27 April 2012, the data on balance sheet assets and liabilities of investment funds had been reported in accordance with the Methodology for reporting statistical data based on Regulation (EC) No. 958/2007.

Investment funds are defined in Article 1 of Regulation ECB/2007/8 as collective investment undertakings that invest in financial and non-financial assets to the extent to which their objective is to invest capital raised from the public.

Pension funds and money market funds are not included. The latter are defined consistent with Regulation (EC) No. 25/2009 of the European Central Bank of 19 December 2008 concerning the consolidated balance sheet of the monetary financial institutions sector (recast), transposed by the National Bank of Romania into Chapter II of the *Regulation*.

According to this *Regulation*, money market funds shall send to the National Bank of Romania monthly reports containing statistics on their assets and liabilities.

The types of instruments representing assets and liabilities of investment funds as well as the classification of their counterpart by institutional sector are fully harmonised with the methodology under the European System of National and Regional Accounts (ESA95).

9. On-Balance Sheet Assets and Liabilities of Non-Bank Financial Institutions in the General Register

Starting with 31 March 2008, the data on non-bank financial institutions are reported in accordance with the methodology under Guideline of the European Central Bank of 4 December 2009 amending Guideline ECB/2007/9 on monetary, financial institutions and markets statistics (ECB/2009/23). This methodology was transposed into NBR Regulation No. 31/2011 on reporting statistical data and information to the National Bank of Romania, Chapter IV “Statistics on balance sheet assets and liabilities of non-bank financial institutions”, Title I. Thus, non-bank financial institutions in the General Register operated by the NBR submit statistical data concerning on-balance sheet assets and liabilities outstanding at the end of the reporting quarter, starting with the end of 2008 Q1.

Until 27 April 2012, the data on the balance sheet assets and liabilities of non-bank financial institutions had been reported in accordance with NBR Norms No. 12/2007.

The balance sheet assets and liabilities are broken down by financial instrument and institutional sector, in accordance with the methodology provided under the European System of National and Regional Accounts (ESA95).

The balance sheet breakdown by type of non-bank financial institutions is in line with the lending activities regulated by Law No. 93/2009 on non-bank financial institutions and with the General Register entries.

Based on the data submitted by non-bank financial institutions and in keeping with the analysis requirements, loans are classified by institutional sector (households, non-financial corporations, other sectors and non-residents), type of financing (consumer, housing and other loan types), agreed maturity (up to 1 year, over 1 year and up to 5 years, and over 5 years) and currency (lei, euro and other).

10. Average Interest Rates Applied by Credit Institutions

Starting January 2007, average interest rates on deposits and loans and average lending and deposit rates on new business are calculated based on the methodology laid down in Regulation (EC) No. 63/2002 of the European Central Bank of 20 December 2001 concerning statistics on interest rates applied by monetary financial institutions to deposits and loans vis-à-vis households and non-financial corporations (ECB/2001/18), as amended by Regulation (EC) No. 290/2009 of the European Central Bank of 31 March 2009 (ECB/2009/7). This methodology was transposed by the National Bank of Romania into NBR Regulation No. 31/2011 on reporting statistical data and information to the National Bank of Romania, Chapter III, Title I, thus repealing NBR Norms No. 11/2009.

Average interest rates are calculated as an arithmetic mean of annualised agreed rates weighted by the outstanding amounts of loans/deposits at the end of the reported month or by the new deposit/loan contracts during the reported month.

The annualised agreed rate is the interest rate agreed between the credit institution and the customer for a deposit or loan, converted to an annual basis and quoted in percentages per annum.

Pursuant to the *Regulation*, average interest rates are determined for the following institutional sectors: non-financial corporations, households and non-profit institutions serving households, as well as for the following balance sheet items: loans (total), overdrafts, revolving credit, claims related to (extended and opportunity) credit cards, housing loans, consumer credit, other lending (including also business development loans granted to freelancers and family associations), overnight deposits, deposits redeemable at notice, time deposits and repo agreements.

11. Credit Risk Indicators

11.1. Classification of Loans Granted and Investments Made by Credit Institutions

In December 2012, NBR Regulation No. 16/2012 on classification of loans and investments, as well as the establishment and use of prudential value adjustments, repealing NBR Regulation No. 11/2011, as subsequently amended and supplemented, came into force.

Financial assets representing loans recorded by lenders in relation to the debtors outside the credit institution sector are classified in the following categories: (a) “standard”; (b) “watch”; (c) “substandard”; (d) “doubtful”; (e) “loss”. Loans/investments recorded by lenders in relation to credit institutions are classified only in the categories: “standard” or “loss”.

Loans/investment are classified by lenders according to the following criteria: debt service, the debtor’s financial performance and the initiation of legal proceedings. The classification in a single category is made by taking into consideration the principle of downgrading by contamination and the weakest of the individual classification categories.

Pursuant to NBR Regulation No. 16/2012, the adjustments for impairment of loans/investments are impairment adjustments determined under the International Financial Reporting Standards (IFRS) and recorded in special accounts, while the prudential value adjustments for loans/investments are value adjustments calculated by using a prudential methodology and recorded off accounting ledgers. The two notions replaced the “credit risk provisions” under NBR Regulation No. 3/2009, as subsequently amended and supplemented.

11.2. Key Prudential Indicators

As from 2007, the minimum regulated threshold for the solvency ratio has been 8 percent, as a result of transposing Basel III Accord provisions into the national regulatory framework.

The leverage ratio measures to what extent credit institutions’ own funds cover their financing. It is calculated as the ratio of Tier 1 capital to the average value of assets.

Starting with January 2012, given the amendments to the regulatory framework, in view of the harmonisation of the chart of accounts and the financial and prudential reporting system with the new rules required by the switch to the IFRS, certain loan portfolio quality assessment indicators determined based on financial statements (whose numerator represented “past-due and doubtful claims”) could no longer be calculated and were therefore replaced by the following indicators: (i) impaired loans to non-bank clients (net value)/total non-bank loan portfolio (net value); (ii) impaired loans to non-bank clients (net value)/total assets (net value); and (iii) impaired loans to non-bank clients (net value)/total liabilities.

In compliance with the provisions of NBR Order No. 27/2010 for the approval of the Accounting Regulations pursuant to the IFRS applicable to credit institutions, effective 1 January 2012, as subsequently amended and supplemented, the key elements that led to the introduction of the said indicators were as follows:

- (a) the different grouping of assets and liabilities;
- (b) the restructuring of “past-due claims” and “doubtful claims” accounts based on the IFRS presentation requirements and the FINREP reporting requirements (financial reporting framework for prudential supervision at individual level, established based on NBR Order No. 3/2011). Thus, while “past-due claims” included, in line with the previous accounting regulations, only overdue instalments, the remainder of the loan being recognised in the current accounts, the IFRS rules require that the full amount of the loan to be repaid shall be disclosed as overdue (principal, interest, amounts to be amortised). “Doubtful claims” included only disputed claims, while, according to the IFRS, the item “impaired loans” was introduced, consisting of assets for which there is objective evidence of impairment (loss-generating events, such as an increase in unemployment rate in the geographic area of the debtors, a decline in prices of mortgaged property in the relevant areas, observable data that indicate a quantifiable contraction in expected future cash flows) and which include loans that are not yet overdue and undisputed claims;
- (c) the mandatory introduction of the effective interest rate method in the implementation of the IFRS (previously optional, along with the linear method) for scheduling the amounts relative to the effective yield of a debt security, thus impacting the asset value;
- (d) the introduction of some new accounts representing “amounts to be amortised” to recognise the amounts, other than interest, that are taken into account when calculating the effective interest rate (e.g. collected commissions); and
- (e) the recognition in the balance sheet, in the context of the switch to the IFRS, of the items “Receivables written off from assets, but still followed up” and “Debtors resulting from claimed penalties” previously recorded as off balance sheet items (making the necessary adjustments for impairment losses and keeping them on balance sheet until they no longer generate future benefits).

The credit risk ratio is calculated as the ratio of gross value of exposure to loans and related interest under “doubtful” and “loss” to total classified loans and related interest pertaining to non-bank loans, off-balance sheet items excluded.

The non-performing loan ratio is the key loan portfolio quality assessment indicator from a prudential perspective and is calculated based on prudential reports on loan classification. It takes into account the gross value of exposure to non-bank loans and interest overdue for more than 90 days and/or for which legal proceedings were initiated against the operation or the debtor (classified in national regulations under “Loss 2”) as a share in total classified loans and related interest pertaining to non-bank clients, off-balance sheet items excluded. This definition is compliant with the recommendations in the IMF’s Compilation Guide on Financial Soundness Indicators and is the most widely used at international level. The volume of overdue loans includes the outstanding loans and related interest, regardless of the number of overdue instalments.

As for liquidity, banks are required to calculate the liquidity indicator as a ratio of effective liquidity to required liquidity for each maturity band (up to 1 month, between 1 month and 3 months, between 3 and 6 months, between 6 and 12 months, and more than 12 months). These provisions are currently part of NBR Regulation No. 25/2011 on the liquidity of credit institutions (effective January 2012). Credit institutions have to maintain a liquidity indicator – calculated for all operations in lei equivalent – of at least 1 for the following maturity bands: up to 1 month, between 1 month and 3 months, between 3 and 6 months, and between 6 and 12 months.

11.3. Credit Risk Information

11.4. Loans Granted and Commitments Assumed by Credit Institutions

11.5. Loans Granted by Credit Institutions

11.6. Debts Overdue for more than 30 Days Incurred by Individuals

Following the amendment of Regulation No. 4/2004 on the organisation and functioning of the Central Credit Register operated by the National Bank of Romania, starting May 2007, credit institutions no longer report to the

Central Credit Register past-due debts for more than 30 days in the repayment of loans by individuals with an exposure below lei 20,000. These indicators (with no limit exposure provided) are reported by the Credit Bureau, based on the data supplied by banks and non-bank financial institutions participating in the Credit Bureau System. In these reports, the outstanding amount recorded with the Credit Bureau represents the value of the past-due debt (principal, interest and penalty rate) in relation to the concerned loan, denominated in the loan currency.

11.7. Loans Granted and Commitments Assumed by NBFIs + EMI + PI

11.8. Loans Granted by NBFIs + EMI + PI

The credit risk information encompasses identification data on a debtor – non-bank legal or natural entity – and on the following lei- and foreign currency-denominated operations whereby credit institutions face risk exposure to the respective debtor via: (a) loans and (b) commitments assumed by the credit institution on behalf of the debtor.

The credit risk information refers to the exposure of each credit institution to a single debtor, which may be equal to or higher than lei 20,000. Starting August 2004, following the entry into force of Regulation No. 4/2004 on the organisation and functioning of the Central Credit Register operated by the National Bank of Romania, the former also received reports on the amounts outstanding (loan principal) for more than 30 days in respect of individuals whose exposure was lower than lei 20,000; this provision was applied until March 2007.

The borrower's ownership type is consistent with MPF Order in force approving the Financial Reporting System for economic agents (Types of Ownership Nomenclature); the type of loan granted to non-bank legal and natural entities (by risk) observes the accounting rules compliant with the International Financial Reporting Standards applicable to credit institutions and with the accounting rules compliant with EU Directives (2012); the loan currency respects the globally applicable regulations; activity of borrower is consistent with Order No. 337/2007, issued by the President of the National Institute of Statistics, on updating NACE. The classification meets the analysis requirements of the National Bank of Romania.

Tables 11.3, 11.4, 11.5, 11.7 and 11.8 show credit risk information reported to the Central Credit Register.

11.9. Rejected Debit Payment Instruments

11.10. Accountholders that Generated Payment Incidents

Tables 11.9 and 11.10 provide information on the rejected debit payment instruments as well as on the accountholders that generated payment incidents related to cheques, bills of exchange and promissory notes.

12. Money Market Indicators

12.1. Interbank Operations

According to NBR Norms No. 14 of 1 November 2007 amending and supplementing NBR Norms No. 4/1995 on the functioning of the interbank money market, BUBID and BUBOR become ROBID and ROBOR as follows:

- ROBID: the interest rate on operations to raise funds; and
- ROBOR: the interest rate on operations to invest funds.

13. Foreign Exchange Market Indicators

13.1. Interbank Foreign Exchange Market

The monthly volume of transactions in the interbank foreign exchange market represents the sum of the daily highs of sales and purchases. The average annual volume of foreign exchange transactions is calculated as an arithmetic mean of monthly foreign exchange transactions.

The average monthly exchange rate (EUR/RON and USD/RON) is a simple arithmetic mean of daily exchange rates calculated and released by the National Bank of Romania. The average annual exchange rate (EUR/RON and USD/RON) is calculated as a simple arithmetic mean of average monthly rates.

14. Capital Market Indicators

14.1. Bucharest Stock Exchange – Regulated Market

The BET (Bucharest Exchange Trading) index is the BSE's first official index launched on 19 September 1997. It is calculated as a weighted average (with free float capitalisation) of the prices of stocks that make up the index basket (top ten most liquid equities listed on the BSE).

The Composite Index of the Bucharest Stock Exchange (BET-C) was launched on 16 April 1998 and reflects the evolution of all the companies traded on the main market segment (Regular). The calculation formula is similar to that used for the BET index, as the BET-C index is a market capitalisation weighted index of all its component companies.

Financial investment companies are not included in the basket of BET and BET-C indices. In order to prevent the developments in a small number of companies from having a significant impact on the index, the weight of any company in the index basket must be no higher than 20 percent.

The BET-FI index is the first sector index developed by the BSE. It was originally calculated for the five financial investment companies listed and was envisaged to include all the financial investment companies to be listed subsequently. The index was launched on 31 October 2000, its calculation methodology being the same as that used for the BET-C index.

The BET-XT and BET-NG indices were launched on 1 July 2008, the methodology for their calculation being similar to that described above. The BET-XT index covers the developments in the 25 most liquid and most heavily traded companies on the regulated market, including financial investment companies, each accounting for no higher than 15 percent of the index basket.

The BET-NG index is a sector index reflecting the evolution of the share prices of the companies traded on the regulated market whose core business is related to the energy sector and its related utilities. The maximum weight a company can hold in the index basket is 30 percent.

The ROTX (Romanian Traded Index) is a real time reflection of the movements of the blue chip stocks traded on the BSE. There is no fixed number of shares included in the ROTX index portfolio, as the key selection criteria are liquidity and market capitalisation. Calculated in lei, euro and US dollars and disseminated in real time by the Wiener Börse AG, the ROTX index is designed as a tradable index and can be used as an underlying asset for derivatives and structured products.

14.2. Bucharest Stock Exchange – RASDAQ Market

The RASDAQ Composite (RASDAQ-C) Index was launched on 31 July 1998. Every company listed on the RASDAQ market is included in the index calculation. Its calculation method is specific to that applying to stock market indices deriving from market capitalisation weighting. The weight of a stock in the index is no higher than 25 percent of total RASDAQ-C capitalisation.

RAQ I and RAQ II indices were launched concurrently with the introduction of the upper tiers on the RASDAQ market in order to reflect the overall developments in prices of top issuers listed on RASDAQ's Tier I and Tier II. The calculation method is similar to that used for RASDAQ-C.

15. Romania's Balance of Payments and International Investment Position Indicators

15.1. Balance of Payments

The balance of payments gives an overview of Romania's economic and financial transactions with the rest of the world for a specific time period, in respect of goods, services, incomes, transfers free of counterparty contribution (donation, aid and the like) as well as of financial assets and liabilities.

The terms and definitions in the Balance of Payments are compliant with the IMF Balance of Payments Manual, 5th edition, 1993. Data are provided on a monthly basis.

15.2. International Investment Position – Key Indicators

Medium- and long-term external debt, i.e. non-guaranteed debt, includes the balance of medium- and long-term deposits of foreign banks with resident banks.

15.3. International Investment Position

According to the internationally accepted definition, Romania's international investment position includes the country's stock of external assets and liabilities at a given moment. The standard table on the international investment position comprises the beginning and ending balances of external assets and liabilities, as well as the financial transactions, exchange rate movements, global price movements, and other financial changes over the period under review. Financial transactions referred to in the international investment position are included in the balance-of-payments financial account.
