

MONTHLY BULLETIN

JANUARY 2008

N O T E

The drafting was completed on 9 April 2008.

The National Institute of Statistics, Ministry of Economy and Finance, Bucharest Stock Exchange and National Bank of Romania supplied data. Some of the data are still provisional and will be updated as appropriate in the subsequent issues.

The Research and Publications Department carried out the drafting, English version and technical co-ordination.

Reproduction of the publication is forbidden. Data may be used only by indicating the source.

SUMMARY OF MAIN ECONOMIC DEVELOPMENTS AND MONETARY POLICY IN JANUARY 2008

Real Economy

In 2007 Q4, annual dynamics of real GDP added 0.9 percentage point versus the previous quarter to stand at 6.6 percent. In quarter-on-quarter comparison, structural analysis of the fourth-quarter performance by demand components does not reveal any notable changes in the growth pattern, special mention deserving the persistence of a pronounced negative contribution of net external demand to GDP advance (-7.5 percentage points) and fast-paced domestic demand (12.4 percent).

Actual final consumption of households rose at an annual pace of 9.2 percent, marginally slower than in the previous quarter. Household spending remained its fastest-expanding component, posting a rise similar to that recorded in 2007 Q3 (10.3 percent), whereas the rate of increase of private and public government expenditure was below 4 percent.

The annual growth rate of government final consumption was broadly unchanged quarter on quarter, i.e. 6 percent.

The annual rate of increase of gross fixed capital formation, albeit on the wane from the preceding quarter, remained very fast at 28 percent, so that in 2007 Q4 too this demand component had the largest contribution to GDP growth (7.8 percentage points). Behind the expansion of this component stood mainly the higher expenditures on construction works, both new works and capital repair (up 26.4 percent and 48 percent respectively), as well as stronger equipment purchase figures (including transport means bought by companies and institutions), whose dynamics regained momentum, reaching 32.1 percent.

Net external demand had further a negative contribution to GDP growth, albeit shrinking quarter on quarter, and ran at -7.5 percentage points. The explanation for this development lies with the pick-up in the annual dynamics of exports of goods and services (by around 10 percentage points), yet imports continued to outpace exports (28.6 percent and 14.9 percent respectively). The annual dynamics of imports of goods and services remained very brisk, adding another 3.9 percentage points to the earlier-quarter performance, due to the stimulative effect of pressures

Macroeconomic Indicators

	percentage change January 2008 / January 2007
1. Industrial output	6.1
2. Labour productivity in industry	8.9

exerted by investment and consumption demand as well as simpler customs-related formalities (including the removal of customs duties on intra-EU trade) after Romania's joining the economic bloc. Mention should be made of the statistics effect arising from applying the Intrastat, which provides for full registration of goods when going through customs, unlike the procedure in Extrastat, where goods are registered when put into free movement.

In January 2008, the annual growth rate of industrial output volume outran by 3.5 percentage points the previous quarter's level, standing at 6.1 percent, boosted by the performance seen in the manufacturing and energy sectors. In the former sector, the swifter dynamics recorded in January was largely due to the industries involved in the production of non-durables and capital goods; as far as capital goods are concerned, structural analysis shows the lack of retooling, with road vehicles sub-sector being the chief driver of the improved performance across manufacturing. For the months ahead, the outcome of business surveys hints at a potential pick-up in the growth of industrial output volume in 2008 Q1 in both quarterly and yearly terms given that: (i) the DGEFCIN confidence indicator rose further, standing at 3, well above the average for the final quarter of 2007; and (ii) new production facilities have become operational at Jucu (Nokia – mobile phones) and Rădăuți (Egger – wood-based panels).

Registered unemployment rate (4.3 percent, or 4.0 percent in seasonally-adjusted terms) remained subdued, hinting at the likelihood of further pay rises in the private sector overtaking productivity gains, against the backdrop of fast-paced economic growth. The annual dynamics of net nominal average wage saw a short-lived acceleration to reach 30.7 percent as a result of a base effect related to public sector wages (earlier granting of the "13th-month" salary in December 2006); in the other economic sectors such as industry, construction or private services, the annual growth rate of wages was little changed, ranging from 20.3 percent to 25.1 percent.

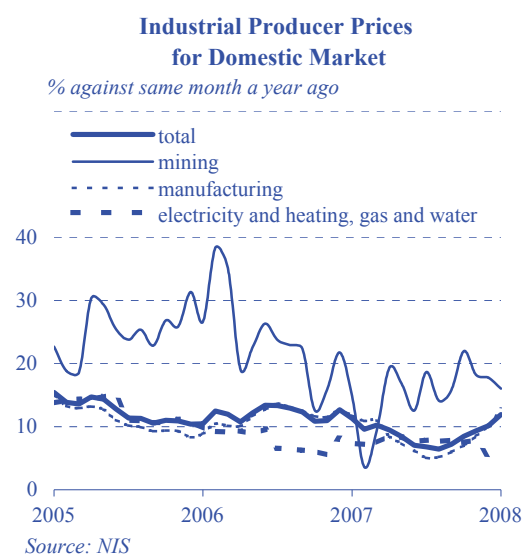

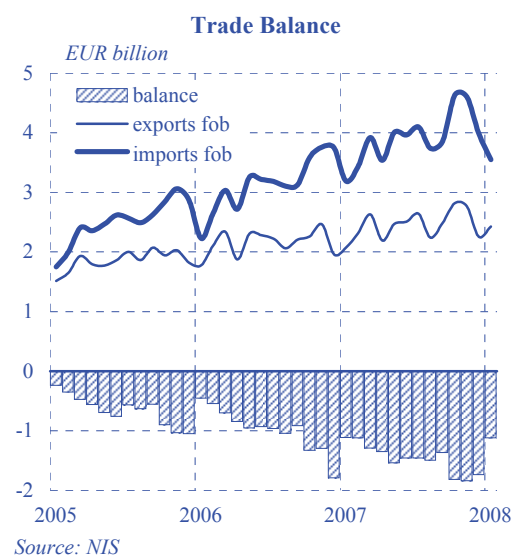

The annual pace of increase of turnover in the trade and services sectors picked up month on month, standing at around 20 percent in January 2008. This development was underpinned by the strong rebound in retail sales of motor vehicles and fuels, the growth rate of which almost quadrupled to 38.7 percent, possibly amid fears that the new algorithm for calculating the car tax (estimated to become effective as of 1 July 2008) might render

new motorcars more expensive. By contrast, the growth rates of receipts from “retail trade, except for motorcars and fuels” and “market services to population” decelerated to 16.6 percent and 18.5 percent respectively.

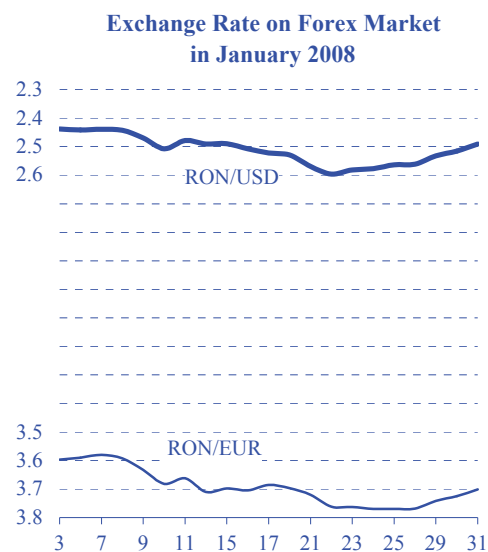

In January, the annual dynamics of exports outpaced that of imports for the second consecutive month (16.9 percent versus 11.3 percent), while the trade balance posted a deficit fob/fob of EUR 1,120 million, similar to the year-earlier reading. The following categories of exports recorded the fastest growth rates: machinery and transport means (16.1 percent), chemical products (21.6 percent) and mineral fuels and lubricants (97.7 percent). Some 61.2 percent of the current account deficit, which reached EUR 1,135 million (up 16.8 percent year on year), were covered by net direct investment.

In January 2008, the annual growth rate of industrial producer prices for the domestic market advanced considerably against the 2007 Q4 average (up 2.6 percentage points, to 11.9 percent), on account of the pass-through of developments on international markets of certain categories of raw materials (in the agricultural and energy sectors); furthermore, their impact was magnified by the depreciation of the domestic currency.

In the month under review, the 12-month inflation rate re-entered an upward path, advancing 0.69 percentage points from end-2007, to 7.26 percent. Behind this development stood mainly: (i) a significantly weaker RON compared to the EUR (4.4 percent month on month), which impacted both CORE2 inflation and administered prices; (ii) the unfavourable base effect generated by the moderate increases or even declines in January 2007 in the prices of some basic foodstuffs (included in the CORE2 inflation basket) and cheaper natural gas; (iii) the hike in fuel prices, amid tensions on the world oil market.

Monetary Policy

In its meeting of 7 January, the National Bank of Romania Board decided to raise the policy rate by 0.5 percentage point to 8.0 percent per annum and continue to pursue a firm management of money market liquidity via open-market operations. Behind this decision stood mostly the persistence of supply-side inflationary shocks – basically the increase in food prices – along with the emerging signs of stronger demand-side pressures. In order to enhance the restrictiveness of broad monetary conditions, the central bank also decided to leave unchanged the reserve ratios on both RON and foreign currency-denominated liabilities of credit institutions.

Over the period under review, in an attempt at countering the massive liquidity inflows performed by the State Treasury, the National Bank of Romania made heavy recourse to sterilisation operations. In view of the credit institutions' increasingly pronounced bias towards overnight deposits, including as a result of growing uncertainties surrounding liquidity developments, the monetary authority resorted to deposit-taking operations with shorter maturities than that of the main monetary policy instrument. All in all, the outstanding balance of deposits taken by the central bank rose 52 percent month on month, standing at RON 10,087 million at end-January.

The policy rate hike fed through into interbank money market rates with a certain lag. Therefore, such interest rates reflected the new level of the key rate no sooner than the last week of January, at the beginning of the new maintenance period. Thus, the average interest rate on interbank deposits added 0.46 percentage point against December to 7.79 percent. At the same time, volatility of overnight rates stayed on a downward drift, touching a 2½-year low.

All the above notwithstanding, downward pressures on the domestic currency built up, as investors' risk aversion rekindled and the outlook for the future movements in the RON exchange rate kept deteriorating. Against this backdrop, both the interbank foreign-exchange market turnover and the net demand for foreign currency surged to unprecedented levels in January. Consequently, the monthly depreciation rate of the RON to the EUR stood at 4.4 percent in nominal terms.

The rising path in interbank rates fuelled the increase in lending and deposit rates applied by credit institutions to new business.

Average lending rates edged 0.4 percentage point higher versus the previous month, reaching 12.14 percent. As far as households were concerned, the 0.55 percentage point rise – to 12.49 percent – was in contrast to the declines observed in the preceding two months. The average interest rate on new loans granted to corporate non-bank clients stayed on the upward trend that started in October 2007 (up 0.35 percentage point to 11.97 percent). Average deposit rates advanced as well, with interest rates on new deposits of non-financial corporations (up 0.50 percentage point to 7.78 percent) posting sharper growth.

LEGISLATIVE INDEX

Main Rules and Regulations Adopted in the Economic, Financial and Banking Areas in January 2008

Decision No. 1 of 8 January 2008 issued by the President of the Private Pension System Supervisory Commission approves Norms No. 1/2008 on the actuarial calculus of the technical provision for privately managed pension funds (Monitorul Oficial al României No. 38/17 January 2008).

Law No. 8 of 10 January 2008 approves Government Ordinance No. 30/2007 regulating some financial issues (Monitorul Oficial al României No. 29/15 January 2008).

Law No. 11 of 15 January 2008 amends Art. 58 of Law No. 19/2000 on the public pension system and other social security benefits (Monitorul Oficial al României No. 40/17 January 2008).

Order No. 2 of 21 January 2008 issued by the President of the Romanian Energy Regulatory Authority amends Order No. 29/2007 issued by the President of the Romanian Energy Regulatory Authority as well as several other orders issued by the President of the National Regulatory Authority in Natural Gas Sector approving prices and setting regulated prices for distribution of natural gas (Monitorul Oficial al României No. 74/31 January 2008).

Government Decision No. 67 of 23 January 2008 approves the indexation of some household incomes starting January 2008 (Monitorul Oficial al României No. 61/25 January 2008).

Decision No. 4 of 22 January 2008 issued by the President of the Private Pension System Supervisory Commission approves Norms No. 3/2008 on participants' transfer among privately managed pension funds (Monitorul Oficial al României No. 66/29 January 2008).

Government Ordinance No. 10 of 30 January 2008 sets the basic wage and other benefits of public-sector employees, in compliance with Government Emergency Ordinance No. 24/2000 on setting basic wages for public-sector employees and the staff whose wages are set according to Annexes II and III to Law No. 154/1998 on setting basic wages in the public sector and the remuneration of public dignity functions, as well as certain regulating measures of the remuneration package and other benefits granted to employees whose wages are set by special laws (Monitorul Oficial al României No. 79/1 February 2008).

Main Regulations Issued by the National Bank of Romania in January 2008

Circular No. 1 of 3 January 2008 sets at 7.50 percent per annum the reference rate of the National Bank of Romania for January 2008 (Monitorul Oficial al României No.18/10 January 2008).

Circular No. 2 of 10 January 2008 sets the interest rates on minimum reserve requirements in RON and EUR starting with 24 December 2007 - 23 January 2008 maintenance period (Monitorul Oficial al României No.30/15 January 2008).

Order No. 1 of 14 January 2008 issued by the National Bank of Romania Governor amends and supplements Order No. 5/2005 issued by the National Bank of Romania Governor on the approval of EU-compliant accounting regulations applicable to credit institutions (Monitorul Oficial al României No.52/23 January 2008).

Order No. 34 of 17 January 2008 issued by the National Bank of Romania Governor sets the systems governed by Law No. 253/2004 on settlement finality in payment and securities settlement systems (Monitorul Oficial al României No.61/25 January 2008).

Regulation No. 1 of 23 January 2008 on the approval of the conversion of financial institutions into credit institutions (Monitorul Oficial al României No.70/30 January 2008).

Regulation No. 2 of 23 January 2008 on the appraisal of the adequacy of the supervision framework in the third home country and the checking of the matching of supervision exercised by competent authorities in third countries with that governed by the principles stipulated in Government Emergency Ordinance No. 99/2006 on credit institutions and capital adequacy, as approved, amended and supplemented by Law No. 227/2007 (Monitorul Oficial al României No.69/29 January 2008).

Regulation No. 3 of 23 January 2008 on the recognition of international credit-rating agencies (Monitorul Oficial al României No.120/15 February 2008).

Norms No. 1 of 30 January 2008 alter and supplement Norms No. 15/2006 issued by the National Bank of Romania on sending primary indicators via the reporting IT system to the National Bank of Romania (Monitorul Oficial al României No.97/7 February 2008.).

*) The flow between budgets was left out of account.

Methodological Notes

1. Main macroeconomic indicators

Monthly data on the main social and economic indicators (data released by the National Institute of Statistics in the Monthly Statistical Bulletin) are preliminary and may be revised subsequently; the final update is made on a yearly basis, based on company surveys and on specific yearly surveys conducted by the National Institute of Statistics.

The industrial production index is a volume index that measures the output of industrial sectors. Starting with 2004, the base year for computing the industrial production index has been 2000. The industrial turnover includes all the revenues recorded by companies, from both their main and secondary activities. Indices for turnover are volume indices; they are preliminary and subject to revision based on retroactive rectifications made by companies of a sample group.

Starting with January 2008, the sample underlying the survey used for measuring wages and the number of employees has been subject to alteration. The nominal net wage is calculated by subtracting from the nominal gross wage the wage tax, the employees' contributions to the health social insurance fund, the individual contribution to the state social security fund and the employees' contributions to the unemployment fund. The quarterly labour cost index is a short-term indicator which enables the assessment of the trends in employee-related hourly labour costs incurred by employers. The methodology and data series are established according to the provisions of Regulation No. 450/2003 of the European Parliament and of the Council concerning the labour cost index.

CORE1 is the underlying inflation measure used by the NBR reflecting changes in market prices; CORE1 is calculated based on the consumer price index excluding administered prices.

CORE2 is the underlying inflation measure used by the NBR reflecting changes in market prices and in prices with relatively low volatility; CORE2 is calculated based on the consumer price index excluding administered prices and high-volatility prices (vegetables, fruit, eggs, fuels).

Data series are updated on a regular basis, after being released by the National Institute of Statistics.

2. Prices in economy

2.1. Consumer prices by main goods and services

Starting with January 2008, fixed-base monthly consumer price indices are calculated on the basis of 2006 average prices and weights based on average expenses in Household Survey.

2.2. Industrial producer prices – total, domestic and foreign markets

The industrial producer price index measures the overall change in prices for industrial goods/services that were manufactured and delivered by domestic producers at the first stage of trade, in a certain time period as compared with the reference period. This indicator covers the products manufactured and traded (imports and/or exports) by the companies the main activities of which are included in NACE Rev.1.

3. Monetary policy indicators

3.1. Open-market operations performed by the National Bank of Romania

The monthly reference rate, laid down by Circular No. 3/1 February 2002, is calculated as an arithmetic mean (weighted by the volume of transactions) between interest rates on deposits taken by the NBR and on reverse repos in the month prior to that when the release was made. The annual average reference rate of the NBR is calculated as an arithmetic mean (weighted by the volume of transactions) between monthly reference rates of the NBR.

Open market operations performed by the NBR and lending and deposit facilities granted to credit institutions are stipulated in NBR Regulation No. 1/30 March 2000. Open market operations performed by the NBR (deposit-taking operations and issues of certificates of deposit) show daily averages for both transactions performed in the reference period (flow data) and their balance (stock data). The average interest rate in the reporting month is calculated as an arithmetic mean weighted by the volume of transactions for interest rates on flow/stock operations.

3.2. Standing facilities granted by the National Bank of Romania to credit institutions

Standing facilities (lending and deposit facilities) granted by the National Bank of Romania to credit institutions are resorted to by credit institutions, at their initiative.

The interest rate on marginal lending facility is the rate at which banks are granted overnight liquidity. The interest rate on marginal deposit facility is the rate at which banks may place with the NBR their liquidity surplus at the end of the business day. The interest rates on standing facilities are established by the NBR Board, in accordance with the monetary policy objectives.

3.3. Required reserves

NBR Regulation No. 6/24 July 2002, as subsequently amended, establishes the regime of minimum required reserves. According to the provisions of the said regulation, banks/central houses of credit cooperatives shall hold funds in RON and foreign currency in accounts opened with the NBR during the maintenance period (from the 24th of the current month to the 23rd of the following month). Required reserve ratio applies during the observance period (from the 24th of the previous month to the 23rd of the current month) to the average level of balance sheet liabilities of banks and to the aggregate balance sheet liabilities of credit co-operative networks. Remuneration of required reserves represents the interest rate equal to at least the average interest rate applied by banks on demand deposits and is applicable to actual reserves.

4. Reserve money

Data refer to monetary financial institutions starting January 2007 and to credit institutions in the previous periods.

5. Monetary balance sheets of monetary financial institutions

According to ESA95 methodology, monetary financial institutions include the following institutional sectors: central bank (S121) – the National Bank of Romania and other monetary financial institutions (S122) – financial corporations and quasi-corporations, which are principally engaged in financial intermediation and whose business is to receive deposits and/or close substitutes for deposits from institutional units other than monetary financial institutions, and, for their own account, to grant loans and/or to make investments in securities. This category comprises credit institutions and money market funds.

The aggregate monetary balance sheet of other monetary financial institutions includes the assets and liabilities of credit institutions (banks, Romanian legal persons; branches of foreign credit institutions; credit co-operative organisations), as well as those of money market funds which invested at least 85 percent of their assets in financial instruments such as money market instruments, shares/units of other money market funds, other transferable debt securities with residual maturity of up to one year, as well as bank deposits, aiming at a profit rate close to the interest rates on money market instruments.

The net consolidated balance sheet of monetary financial institutions shows the aggregation of the National Bank of Romania's monetary balance sheet with that of other monetary financial institutions (credit institutions and money market funds), in which the relations within and between the two institutional sectors (S121 and S122) were considered on a net basis.

6. Broad money M3 and its counterpart

Monetary aggregates have been defined in compliance with ECB methodology.

Narrow money (M1) comprises currency in circulation (banknotes and coins) plus overnight deposits (deposits immediately convertible into cash or used for making payments via bank transfer).

Intermediate money (M2) comprises M1 plus deposits with an agreed maturity of up to and including two years and deposits redeemable at a period of notice of up to and including three months. The definition of M2 mirrors the interest in analysing and monitoring a monetary aggregate which, apart from cash, includes highly liquid deposits as well.

Broad money (M3) comprises M2 plus marketable instruments issued by monetary and financial institutions; money market instruments, in particular money market fund shares and units and borrowings from repurchase agreements, are included in this monetary aggregate (their highly-liquid nature makes these instruments be substitutes for deposits).

7. Breakdown of deposits taken and loans extended by institutional sector

The breakdown of financial instruments by institutional sector has been carried out based on the ESA 1995 methodology (the European System of Accounts), as described in detail in NBR Norms No. 13/2006, namely: non-financial corporations; financial corporations (central bank, other monetary financial institutions, other financial intermediaries, financial auxiliaries, insurance corporations and pension funds); general government (central government, local government and social security funds); households; non-profit institutions serving households; non-residents.

7.2. Deposits from non-government clients

All deposits, regardless of maturity, are included.

8. Average interest rates applied by credit institutions

Starting with January 2007, average interest rates applied to deposits and loans and average interest rates on new business are calculated based on the provisions of NBR Norms No. 14/2006 concerning the statistics of interest rates applied by credit institutions, transposing the provisions of the ECB Regulation (ECB/2001/18) concerning statistics on interest rates applied by monetary financial institutions to deposits and loans vis-à-vis households and non-financial corporations.

Average interest rates are calculated as an arithmetic mean of annualised agreed rates weighted by the outstanding amounts of loans/deposits at the end of the reported month or by the extended/taken amounts during the reported month in relation to new business.

The annualised agreed rate is the interest rate agreed between the credit institution and the customer for a deposit or loan, converted to an annual basis and quoted in percentages per annum.

According to the provisions of the above-mentioned Norms, average interest rates are determined for the institutional sectors “Non-financial corporations” and “Households” as well as for the following balance sheet items: loans (total), bank overdrafts, loans for house purchases, consumer loans, loans for other purposes (including loans for business consolidation extended to freelancers and household associations), overnight deposits, deposits redeemable at notice, deposits with agreed maturity and repos.

The time series for January 2004 through December 2006, calculated according to the provisions of NBR Norms No. 2/2003 on determining and reporting average interest rates applied in the banking system, as repealed by NBR Norms No. 14/2006, have been restated in order to ensure comparability with the data calculated based on NBR Norms No. 14/2006 as of January 2007.

9. Credit risk indicators

9.1. Loan classification

Starting 1 January 2003, the methodology of loan classification and establishment of specific risk provisions was changed by Regulation No. 5/2002, as amended by Regulations Nos. 7/2002, 8/2005 and 12/2006. Regulation No. 8/2005 specifies the financial performance of debtors – natural entities, which shall be rated from A to E, according to the criteria set by credit institutions via internal regulations (depending on income characteristics: certainty, currency denomination, amount after payment of other financial obligations, etc.).

9.3. Credit risk information

9.4. Past-due debts for more than 30 days of individuals

9.5. Loans granted and commitments assumed by credit institutions

9.6. Loans granted by credit institutions

The credit risk information encompasses identification data on a debtor – non-bank, legal or natural entity – and on the following RON- and foreign exchange-denominated operations whereby credit institutions face credit risk exposure to the respective debtor: (a) loans and (b) commitments assumed by the credit institution on behalf of the debtor.

The risk information refers to the exposure of each credit institution in the Romanian banking system to a single debtor, which may be equal to or higher than RON 20,000. Starting with August 2004, following the entry into force of Regulation No. 4/2004 on the organisation and operation of Central Credit Register (former Credit Information Bureau) with the National Bank of Romania, the former also received during August 2004 – March 2007 reports on past-due debts (consisting of the loan principal) for more than 30 days in respect of individuals whose exposure was less than RON 20,000.

Type of ownership of borrower is consistent with Order No. 498/18.06.2007 issued by the Ministry of Economy and Finance (Types of Ownership Nomenclature); type of loans granted to non-bank, legal and natural entities (by risk) is consistent with the Chart of Accounts for Banks and the norms for its implementation (1997), as amended and supplemented subsequently; currency denomination of loans is consistent with applicable regulations worldwide; the classification meets the analysis requirements of the National Bank of Romania; activity of borrower is consistent with Order No. 337/2007, issued by the president of the National Institute of Statistics, on updating NACE; the classification meets the analysis requirements of the National Bank of Romania.

Following the amendment of Regulation No.4/2004 on the organisation and operation of the Central Credit Register with the National Bank of Romania, starting 1 May 2007, credit institutions no longer report to the Central Credit Register past-due debts longer than 30 days in the repayment of loans by individuals with an exposure below RON 20,000. These indicators are reported by Credit Bureau, based on the data provided by the 28 participants (credit institutions) in the Credit Bureau System - please note

that exposure limits no longer apply. In these reports, the outstanding amount recorded with Credit Bureau represents the value of the past-due debt (principal, interest and penalty interest) in relation to the concerned loan, denominated in the loan currency.

10. Money market indicators

According to Norms No. 14 of 1 November 2007 amending and supplement Norms No. 4/1995 on the functioning of the interbank money market, BUBID and BUBOR become ROBID and ROBOR, respectively.

ROBID – interest rate on operations to raise funds; ROBOR – interest rate on operations to place funds.

11. Foreign exchange market indicators

11.1. Interbank foreign exchange market

Monthly volume of transactions in the interbank forex market represents the sum of the daily highs of sales and purchases. The average annual volume of forex transactions is calculated as an arithmetic mean of monthly forex transactions.

The average monthly exchange rate (RON/EUR and RON/USD) is calculated as a simple arithmetic mean of daily exchange rates on the forex market communicated by the National Bank of Romania. The average annual exchange rate (RON/EUR and RON/USD) is calculated as a simple arithmetic mean of average monthly rates.

12. Capital market indicators

12.1. Bucharest Stock Exchange – Regulated market

The BET (Bucharest Exchange Trading) index is the BSE's first official index launched on 19 September 1997. It represents the BSE's reference index, whose methodology allows the establishment of underlying assets for derivatives (futures, options, etc.) and structured products (warrants, certificates, etc.). The index is calculated as a weighted average (with free float capitalisation) of the prices of securities that make up the index basket. The BET index basket comprises the shares of the ten most liquid companies listed on the BSE regulated market, under Tiers I and II.

The Composite Index of Bucharest Stock Exchange (BET C) was launched on 16 April 1998 and represents the overall performance of all companies listed on the BSE regulated market, under Tiers I and II. The calculation method is the same as that used for the BET index, the representation factor being the only weighting factor. In case of a major operational adjustment of the index as a result of listing and/or delisting a company on/from the BSE, the representation factors shall be revised without delay.

Financial investment companies are not included in the basket of BET and BET-C indices. In order to avoid a small number of companies to weigh on the index, the share of any company in the index basket must not be higher than 20 percent.

BET-FI Index is the first sector index developed by the BSE and was originally computed for the five Financial Investment Companies listed and is envisaged to include all financial investment companies to be listed subsequently. The index was launched on 31 October 2000; the calculation method is the same as that used for the BET-C Index.

Regular revisions and adjustments of all three indices are performed on a quarterly basis, while operational revisions and adjustments are carried out without delay, or according to applicable provisions, depending on the situation that required such an operation.

The ROTX (Romanian Traded Index) was launched on 15 March 2005 and is a real-time reflection of the movements of the most liquid blue-chips traded on the BSE. There is no fixed number of shares included in the ROTX index portfolio, as the key selection criteria are liquidity and market capitalisation. Calculated in RON, EUR and USD and disseminated in real time by Wiener Börse, the ROTX index is projected as a tradable index, which may be used as an underlying asset for derivatives and structured products.

12.2. Bucharest Stock Exchange – RASDAQ market

RASDAQ Composite Index was launched on 31 July 1998, its start value equalling 1,000 points. Every company listed on the RASDAQ market is included in the index calculation in order to capture the global trend in share prices. In terms of the calculation method, this index belongs to the set of stock market indices computed by weighting to market capitalisation. The share of a symbol in the index is no higher than 25 percent of total capitalisation of the symbols included in RASDAQ-C. RAQ-I and RAQ II indices were launched concurrently with the introduction of the two upper tiers in order to reflect the overall development of the prices of top companies listed on RASDAQ's first and second tiers. The calculation method is the same as that used for RASDAQ-C. They were launched on 28 October 2002 and their start value equalled 1,079.216 points.

13. Balance of payments and international investment position indicators

13.2. Romania's international investment position – key indicators

Medium- and long-term external debt (non-guaranteed debt) includes the balance of medium- and long-term deposits of foreign banks with resident banks.

13.3. Romania's international investment position

According to the international standard definition, Romania's international investment position includes a country's stock of foreign assets and liabilities at a given moment. The standard table on the international investment position comprises the stocks of foreign assets and liabilities at the beginning and at the end of the period, as well as the financial transactions, exchange rate movements, price movements on the international market, and other financial changes over the same period. Financial transactions referred to in the international investment position are included in the balance-of-payments financial account.
